DataBri-X project

Without legal, there is no AI

In the era of AI, we do not only enter new dimensions in technology, business and social interaction, but also completely unknown territory in ethics and legal. This is critical, since without an accepted and working legal framework, applying AI on a large scale will either fail or produce unwanted and potentially hazardous results. In DataBri-X we investigate the governance aspect and provide first tools and methodologies to address this challenge.

Scope of AI governance in Legal Tech

Governance of AI is a broad field. When it comes to AI applications in the legal industry, a specific scope and quality level needs to be achieved – otherwise legal professionals can't and won't apply AI driven tools.

- Correctness – what AI does is factually correct
- Transparency – how AI works is transparent
- Explainability – why AI results are achieved can be understood
- Sustainability – AI is part of a sustainable data economy

Scenarios and tools

Within DataBri-X, Wolters Kluwer has developed three main scenarios and will use in a first step seven tools from the tool stack to test the scenarios. This will showcase in the end, how a European legal Data Space could look like, which would benefit the whole industry in the end.

Scenario 1: Creation of a European Legal Data Space Nucleus

Scenario 2: Enrichment and analysis of Legal Data

Scenario 3: Addressing legal requirements on AI and data

Tools:

- Data Integrity
- DataViz
- DSR
- KnowDE
- LER
- PoolParty Semantic Suite
- RDFox
- TIMEX

Join us

Real progress in DataBri-X legal use case is only possible if we address real world problems. So we need to scope and test and verify with different stakeholders and user groups. Join us in that effort and bring in your pain points and experiences. We need you!
